Chiropractic treatments improve sensory-processing disorders

Sensory processing disorders (SPD) are impairments in detecting, modulating, interpreting, or responding to sensory stimuli. One study estimates that 5 percent of elementary aged children met the criteria for SPD. These conditions are closely related to other neurodevelopmental disorders and often overlap with autism and ADHD. Recent studies have shown the benefits of chiropractic in enhancing the functionality of individuals with SPD and Autism. In 2011, we have more children and young adults affected by neurodevelopmental disorders than ever before in history. There are many factors involved in this such as birth and/or early childhood trauma, environmental toxins, food allergens, the avoidance of breast feeding and heavy vaccination. These are all areas that show promise as causative factors in the formation of neurodevelopmental disorders

Two recent studies published in the 2011 edition of the *Journal of Pediatric, Maternal & Family Health* showed the benefits of [chiropractic](#) on SPD and Autism. In both cases the children were diagnosed with upper cervical subluxation patterns that were thought to have occurred from early childhood traumas. The children also showed signs of neurological imbalance and subluxation in other regions of the spine. breakthroughs in the medical model.

Results of their care were startling and would naturally be considered major breakthroughs in the medical model.

There are 10 other case studies of children with similar neurodevelopmental issues who have seen significant improvements through chiropractic care. This is evidence of the role that subluxation plays in affecting normal sensory system maturation and development. Hopefully these recent studies will shine a light on the impact of subluxation correction on healthy neurological balance. This can range from immune system disorders, chronic disease and neurodevelopmental problems. More research dollars should be spent on inexpensive, low risk, non-invasive modalities such as chiropractic care for childhood health problems and normal brain and immune system maturation processes.

Dr Terry Notaras

Chiropractor
Osteopath

Dr Terry Notaras is a Doctor of Chiropractic and Doctor of Osteopathy. He is registered as a Chiropractor and Osteopath with the Chiropractic Board of Australia and is a member of the Chiropractors Association of Australia. Dr Notaras is also an Associate Member of the Australasian College of Chiropractors.

Dr Terry Notaras has lived in the local area for 39 years and has been in private practice for 28 years. He has served on the Executive Committees of the Chiropractors Association of Australia.

Dr Notaras has looked after the health of some of the world's best professional Golf Tour. He has also looked after the Olympic Cycling Squad as well as many other elite athletes. This background allows the technique used at Southern Spinal Care to be the latest and the most effective in the world.
